DETAILED ACTION

1. Applicant's election of Group 1, claims 1-6 is acknowledged.

Claims 1-6 are present for examination.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over **Toyoda et al (4,536,860)**.

Regarding claim 1, Toyoda et al (see Fig.1) depicts a semiconductor memory device structure which includes a plurality of memory cells (M00 to Mnm) arranged in plurality of locations with respective word lines (W0 to Wn) with corresponding word driver transistor (WD0 to WDn) acting as claimed word drivers. It is noted that Fig.6 further shows that a plurality of controlling voltages Vx being applied to selected word driver transistors (WD) by the control signal (WE) and switching means (SW). However, col.6 (lines 3-10) states that "...when a current Ixw flows during the read operation, the selection signal Vxs is lower than that during the write operation by the amount RxIxw. ***In other words, an amplitude R of the potentials of the selected and non-selected word line during the read operation is smaller than W during the write operation by***

Rxlxw". Thus, it would be obvious from this statement that voltage applied to selected word liens for read operation is always **lower** than voltage applied to the same during write operation.

Furthermore, col. 7 (lines 10-12) also mentions that "**the non-selected word line Wn is kept at the lowest non-selection level**" thus obviously suggests that the voltages applied to these non-selected lines (for either read or write operations) must be lower than the voltage applied at selected word lines for read operation because it is kept at the lowest possible voltage level as described in Toyoda reference. See entire teachings.

3. Other claims contain allowable subject matter over prior arts of record.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims **3** and **4** are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3, line 2, the word "**recharge**" is indefinite. Does it imply the "**precharge**" operation as commonly known in this art?

Claim 4, line 2, the word "**liens**" is mis-spelled.
